	Waste water recycling	
--	----------------------------------	--

Wastewater Recycling System:

Wastewater recycling is considered as a part of green building system. Water from the washbasins is the least polluting source of wastewater. It handles the liquid wastes and makes it suitable for reusing. Recycled water is used for toilet flushing and gardening.

--	---	--

Maintenance of water bodies and distribution system in the campus

KCDC has 02 Bore well for water supply and 02 open well for rainwater harvesting. Water from the Bore well is pumped to the overhead tanks of 10000 Lts capacity and one underground tank of 10000 Lts through 02 pumps and Municipal water connection line.

The water from overhead tank is distributed to all taps across the campus. The maintenance of pipeline distribution system is outsourced. Whenever the problems are identified, immediate actions are taken to restrict wastage of water. The maintenance is carried out through a local service provider.
